Web Technology

Professional Web Page using HTML5 and CSS3

1. Objective

The objective of this assignment is to design and develop a professional, responsive student web page using HTML5 and CSS3. The webpage demonstrates structured content, emantic layout, and standards-compliant design validated using W3C tools.

2. Tools Used

- Visual Studio Code (Code Editor)
- HTML5
- CSS3 (External stylesheet)
- Git
- GitHub
- W3C HTML Validator
- W3C CSS Validator

3. Project Directory Structure

SWETHA_B_webdesign

- index.html
- style.css
- image.jpg
- report.pdf
- validation_screenshot_html.png
- validation_screenshot_css.png

4. Design and Development Steps

1. Created project folder.
2. Developed structured HTML5 page using semantic elements such as `<header>`, `<nav>`, `<main>`, `<section>`, and `<footer>`.
3. Designed layout using external CSS3 file (style.css).
4. Implemented responsive design using media queries.
5. Added student image (compressed to below 20KB).
6. Validated HTML and CSS using W3C validation tools.
7. Uploaded project to GitHub repository.
8. Generated final zip file for submission.

5. Features Implemented

- Responsive design using CSS media queries
- External CSS styling
- Semantic HTML5 layout
- Navigation menu
- Professional sectioned structure
- W3C validated code
- GitHub version control

6. Git & GitHub

The project was initialized using Git and pushed to the GitHub repository. Version control was maintained using Git commands such as `git init`, `git add`, `git commit`, and `git push`.
